Leak Detector Model Type of Leak Detector Detect								
Type of Leak Detector								
MILD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG) STP Full Operating Pressure Check Valve Holding Pressure Line Resiliency (ml) (line bleed back volume as measured from check valve holding pressure to 0 psig) Step Through Time in Seconds (time the MLLD hesitates at metering pressure as measured from 0 psig with no leak induced on the line) Metering Pressure (STP pressure when simulated leak rate 3 gph at 10 psig) Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the lank detector reset (trip) when the line pressure is bled off to zero psig? Does the FSTP property cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above questions indicates the MLLD fails the test. ELLD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG) STP Full Operating Pressure A "No" answer to the above question indi-								
STP Full Operating Pressure Check Valve Holding Pressure Line Resiliency (ml) (line bleed back volume as measured from check valve holding pressure to 0 psig) Step Through Time in Seconds (time the MLLD hesitates at metering pressure as measured from 0 psig with no leak induced on the line) Metering Pressure (STP pressure when simulated leak rate 3 gph at 10 psig) Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the laak detector reset (trip) when the line pressure is bled off to zero psig? Does the STP properly cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above question indi-	MLLD (ALL PRESSURE MEASUREMEN							
Line Resiliency (ml) (line bleed back volume as measured from check valve holding pressure to 0 psig) Step Through Time in Seconds (time the MLLD hesitates at metering pressure before going to full operating pressure before going to full operating pressure before going to full operating pressure when simulated leak rate 3 gph at 10 psig) Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the leak detector reset (trip) when the line pressure is bled off to zero psig? Does the leak detector reset (trip) when the line pressure is bled off to zero psig? Does the STP properly cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above questions indicates the MLLD fails the test. ELLD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG) STP Full Operating Pressure How many test cycles are observed before alarm/shutdown occurs? Does the simulated leak cause an alarm? Yes No Yes			,					
ume as measured from check valve holding pressure to 0 psig) Step Through Time in Seconds (time the MLLD hesitates at metering pressure before going to full operating pressure so measured from 0 psig with no leak induced on the line) Metering Pressure (STP pressure when simulated leak rate 3 gph at 10 psig) Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the leak detector reset (trip) when the line in pressure is bled off to zero psig? Does the STP property cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above question indi-	Check Valve Holding Pressure							
MLLD hesitates at metering pressure before going to full operating pressure as measured from 0 psig with no leak induced on the line) Metering Pressure (STP pressure when simulated leak rate 3 gph at 10 psig) Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the leak detector reset (trip) when the line pressure is bled off to zero psig? Does the STP properly cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above question indi- Does the simulated leak cause an alarm? Yes No	ume as measured from check valve hold-							
Simulated leak rate 3 gph at 10 psig) Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the leak detector reset (trip) when the line pressure is bled off to zero psig? Does the STP properly cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above questions indicates the MLLD fails the test. ELLD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG) STP Full Operating Pressure How many test cycles are observed before alarm/shutdown occurs? Does the simulated leak cause an alarm? Yes No Yes N	MLLD hesitates at metering pressure before going to full operating pressure as measured from 0 psig with no leak							
MLLD opens to allow full pressure after simulated leak is stopped) Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced? Does the leak detector reset (trip) when the line pressure is bled off to zero psig? Does the STP properly cycle on/off under normal fuel system operation conditions? A "No" answer to either of the above questions indicates the MLLD fails the test. ELLD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG) STP Full Operating Pressure How many test cycles are observed before alarm/shutdown occurs? Does the simulated leak cause an alarm?
